the concept of pharmacophylogeny was proposed by professor peigen xiao in the 1980s based on long term studies of chinese researchers especially since the 1950s and is embedded in a wider global development of molecular phylogeny and pharmacology globally the complicated systematic relationships and connectivity between medicinal plants their chemical profiles and therapeutic utilities are consistent goals in pharmacophylogenetic studies which benefit innovative plant based drug r d more recently the concept of pharmacophylogenomics has been of importance in botanical drug r d and over the last decades has seen an gradual increase in its importance pharmacophylogeny and pharmacophylogenomics are truly transdisciplinary i e the synthesis of multiple disciplines such as molecular phylogeny chemotaxonomy plant morphology plant biochemistry molecular biology and the various omics approaches ethnobotany ethnopharmacology and the like medicinal plants within the same phylogenetic groups may have the same or similar therapeutically active metabolites and consequently effects thus forming the core of pharmacophylogeny in the past pharmacophylogeny has played a major role in the search for alternative resources for imported drugs globally including in china at present it continues to play an active role in expanding medicinal plant resources quality control identification of herbal medicines as well as predicting the chemical constituents or active ingredients of herbal medicine and the identification determination of active metabolites in the future it will play an important role in the search for new drugs enabling a scientific understanding of and improving herbal medicines and their use this will form a core basis for the sustainable use conservation and future utilization of traditional natural medicinal resources

interrelationships of the platyhelminthes elucidates the role of the flatworms in the animal kingdom it brings together results from an international group of experts spanning many disciplines who give evidence for the phylogeny of flatworms and

constituent major taxa a combined approach using traditional comparative techniques along with the modern techniques of molecular phylogeny is utilized to show that the monophyly of the phylum is not fully established and that the phylum may in fact consist of two groups the acoels and their relatives which are basal metazoans and the rhabditophora which is a more derived group
